

# *Distance Education*

- Takes place when an instructor and student(s) are separated by physical distance
- Technology bridges the instructional gap
- Voice, video, data and text are used in a variety of technological vehicles such as satellite, Internet and the WWW, videotape, and cable to facilitate student learning

*Distance Education has moved  
from being a quaint irrelevancy  
to being a lightning rod.*

*Robert Threlkeld  
Dean of Learning & Technology  
California State University, Fresno*
